

PHX-Series (6kW~12kW)

Programmable Switching D.C. Power Supply

FEATURES

- Output Voltage : 30V/60V/500V/1000V
- Output Current : 6A~400A
- Output Capacity : 6kW~12kW
- CV/CC Priority ; Particularly Suitable for the EV/HEV Battery Industry
- Adjustable Slew Rate (for Voltage/Current Rising & Falling)
- 3 set of Preset Memory
- Series and Parallel Operation
2 Units in Series Operation ; Only for Output Voltage Below 500V Models
(Includes 500V Model) or 10 Units in Parallel Operation (Example :
12kW x 10 units in Parallel Connection for Output up to 120kW)
- High speed response time
- High Efficiency and High Power Density
- 19" Rack Mount Size Design (Rack Mount Adaptor as Optional Accessories)
- PC Remote Interface (Standard) : RS-232/RS-485, Up to 31 units with one PC
- Analog Control Interface (Standard)
- Protection Function : OVP/OCP/OTP

GW INSTEK
Simply Reliable

The PHX- Series, programmable switching DC power supply, comprises 16 models and the voltage and current ranges are from 30V/200A to 1000V/12A. A single PHX-Series programmable Switching DC Power Supply unit outputs 6kW to 12kW depending on models. To meet the requirements of high power output such as starter motor, EV and HEV battery modules, the PHX-Series can be operated under Master/Slave control with same voltage units. To satisfy the higher power output requirements, the series outputs maximum current of 4000A by connecting 10 units in parallel. (For instance, 10 units of PHX 30-400S(F)C)

The design of the PHX-Series programmable switching DC power supply is to satisfy present requirements of power semiconductor components or power supply industry's high speed applications on V-I characteristics curve tests such as Starter Motor, HEV battery module and power semiconductor component. Power supplies with fast slew rate control are often required by semiconductor circuit design, power module design and product verification to carry out tests on electronic parts' characteristics. The PHX-Series programmable DC power supply, with its built-in adjustable rise or fall slew rate control, allows users to set the rise or fall slew rate parameters for each product's unique characteristics so as to ensure a thorough and complete product verification process. The emerging green energy industry has made LED products very popular. The LED Forward Voltage (VF) under C.V priority will produce inrush current and surge voltage. To solve this problem, the CC priority (option) feature effectively limits the occurrence of inrush current and surge voltage when the supplied voltage to the LED Forward voltage to prevent DUTs from being damaged. The series comprises 16 models and the model numbers are listed as follows. Two output power capacities of the PHX-Series are 6kW and 12kW. The maximum output power of 120kW can be achieved by connecting 10 units in parallel. (For instance, 10 units of PHX 30-400S(F)C)

Analog Control

Isolated Analog Control

1. Power Switch

2. Voltage Setting Knob

3. Current Setting Knob

4. Function Key/Panel lock/Display Selection key

5. Preset Memory

6. Output Terminal

7. Isolated Analog Control Connector (1000V Only)

8. Analog Control Connector (For 30V/60V/500V)

9. Master/Slave Control Connector

10. RS-485 Control Interface

11. RS-232 Control Interface

12. AC Power Inlet

A. The Voltage and Current Collocations of All PHX-Series

Output Voltage for 30V/60V

Output Voltage for 500V/1000V

B. CV/CC Priority Operation Mode

Model Number / Mode & Speed	PHX 30-200 PHX 30-400	PHX 60-100 PHX 60-200	PHX 500-12 PHX 500-24	PHX 1000-6 PHX 1000-12
CV High Speed	10ms	10ms	100ms	100ms
CV Med Speed	100ms	100ms	300ms	300ms
CV Low Speed	200ms	200ms	500ms	500ms
CC High Speed	10ms	10ms	10ms	10ms
CC Med Speed	100ms	100ms	100ms	100ms
CC Low Speed	200ms	200ms	200ms	200ms

PHX-series offers C.V or C.C priority operation mode in response to user demand for testing various characteristics of the DUT such as Battery & LED products. The C.V or C.C priority operation mode ministry again divided into: fast, medium, slow total of three different rates, in order to meet a variety of applications of the specific market. Related settings parameters as above.

D. Series and Parallel Operation Mode

Wire Connection in Series Operation

Wire Connection in Parallel Operation

The PHX series power supply will elevate its total output current level when parallel arrangement (maximum 10 units) is adopted. When series arrangement is utilized, the total output voltage will be two fold (maximum) to that of the rated power output of a single unit. Series connection can only be done for models with rated output voltage under 500V. For parallel connection, the Master/Slave collocation is required. Once Master and Slave units are connected, all control operations must be done from Master unit.

C. Adjustable Slew Rate

The PHX-Series power supply has CV and CC slew rate selections. Slew rate settings are divided into high speed priority setting and slew rate priority setting. When the high speed priority is in use, the CV or CC slew rate will utilize the fastest preset slew rate to conduct operation. The CV or CC rise and fall slew rate can be independently determined once the slew rate priority is adopted.

E. Output On/ Off Delay Time Function (Ref User Manual Function Table Item 7 & 8)

The Delayed time setting for each unit is from 00.00s to 99.99s

Master Unit, via its Output On / Off trigger, controls slave units to conduct multi-unit delayed and synchronized operation to meet user's requirements of different output sequences for testing multi-channel products.

F. Analog Control Interface

External voltage control of voltage output function (for 30V/60V/500V output models)

External voltage control of current output function (for 30V/60V/500V output models)

External voltage control of voltage output function
(Isolated analog control interface for 1000V output model only)

External voltage control of current output function
(Isolated analog control interface for 1000V output model only)

External resistance control of current output function (for 30V/60V/500V output models)

External voltage monitoring (for 30V/60V/500V output models)

On the rear panel of the PHX-series power supply, a 26 pin Analog Control Connector is available to perform lots of remote control and monitoring functions. The output voltage and current can be set using external voltage or resistance. This Analog Control Connector is complied with the Mil 26 pin connector (Phoenix Contact Type : DFMCI, 5/13ST3, 5LR) standard.
